Strange animals

I present the matamata turtle. It has got a triangle head and it eats leaves.

This is the axolotl. It is very funny and similar to UFO.

Let's look at the hairy lobster. It lives in the Pacific near Easter Island.

This is the *Ogcocephalus darwini*. It looks as if he was wearing a make-up.

Here I introduce the ant panda.
This is a wasp and it lives in Chile.

This is the fruczak dove. This is a butterfly.

The most interesting creature is the blue dragon. This is a sea snail.

My favourite animal is the venezuelan moth.
It looks like a furby and in my opinion this is
the most beautiful moth in the world.

This is the atheris. This snake has got scales like a briar.
